

## High School CPR and Defibrillator Program in British Columbia

- BCEHS partnered with the Advanced Coronary Treatment (ACT) Foundation in 2005 to help bring life-saving skills to secondary school students throughout the province.
- The ACT Foundation is a national charity dedicated to ensuring Canadian high school students graduate knowing when and how to administer CPR and how to use a defibrillator.
- BCEHS paramedics provide CPR instructor training to high school teachers. The teachers are then able to teach their students this life-saving skill as part of their curriculum.
- Through this partnership in BC:
  - 506,000 students have been trained in CPR;
  - 242 secondary schools have established the program; and
  - 46,000 students are trained by their high school teachers every year.
- In 2012, the ACT Foundation added the Automated External Defibrillator (AED) enhancement to the BC high school program.

## About the ACT Foundation

The ACT Foundation is the national charitable organization establishing FREE CPR and defibrillator training programs in Canadian high schools. The program is built on ACT's award-winning community-based model of partnerships and support—ACT raises funds to donate program start-up resources (e.g. mannequins, AED training units, teacher training) to schools, and guides schools in program set-up to ensure long-term sustainability. ACT's health partners who are committed to bringing the program to high schools across British Columbia and throughout Canada are AstraZeneca Canada, Sanofi Canada and Amgen Canada.
